

Thalia Villalva

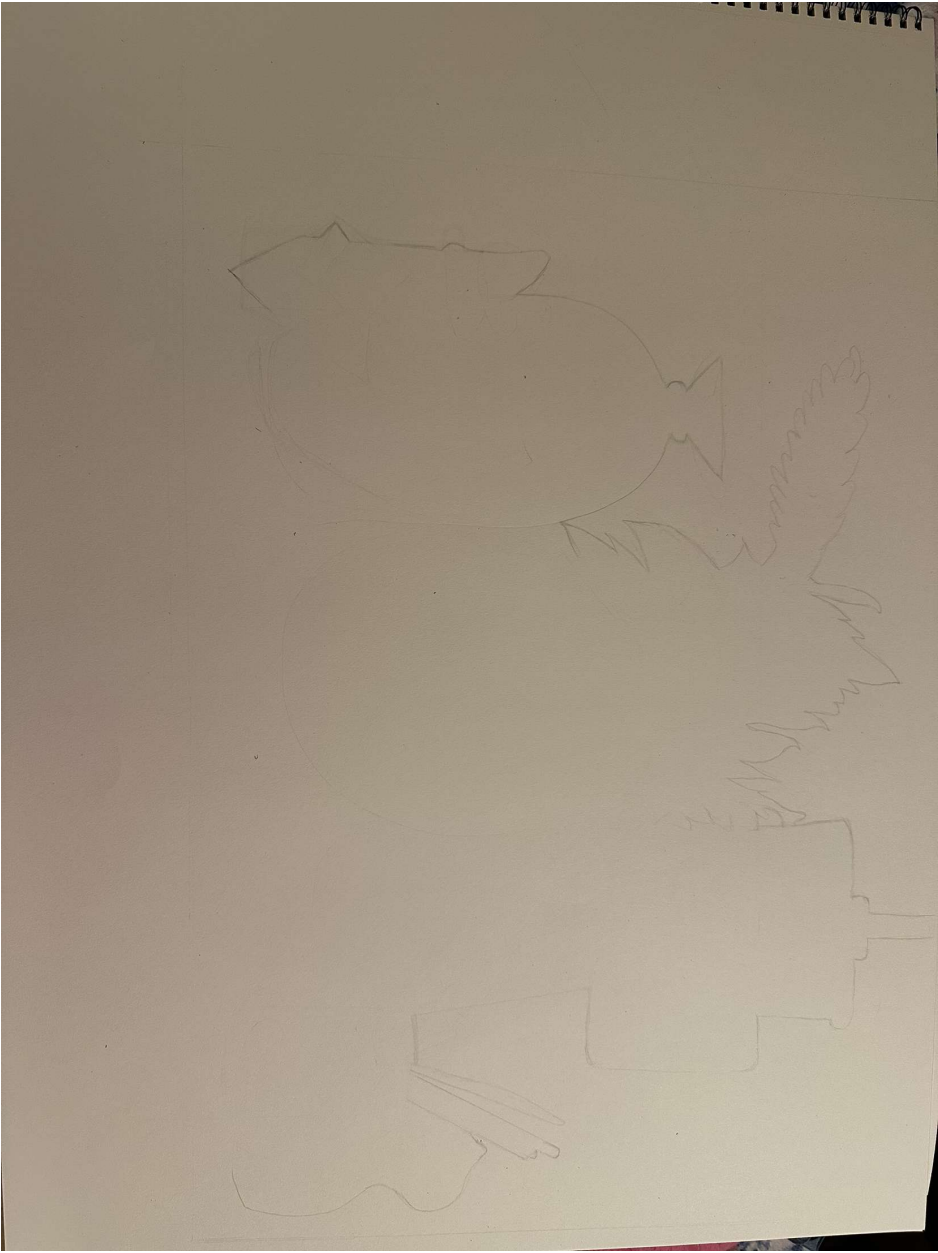

Drawing is different when working with still life versus imagination because you actually have something to look at and have a reference to go back to, whereas with your imagination, you're able to make it up as you go. My definition of drawing is being able to express yourself or what you're feeling, any thoughts you think intrinsically that you cannot say in words; you are able to express creativity using any form of media, dry or wet. My definition of art is no boundaries to hold you back when it comes between you and your creative abilities, not putting yourself in a box, and just being able to see where your mind is able to go. Drawing is important in our modern-day lives and culture because it is the foundation of many building blocks in this society and the past. Due to its rich history, it holds B.C. Without drawing/art, our world wouldn't function as vibrantly.
